

RAREBREED CLIENT PROJECT

'Cosmetic Accessory Concept Packaging Project'

This handover document details the assets and requirements as part of the design outcome for my summer client project with *Rarebreed Packaging*. According to the design brief, the expected product was a series of three packaging concepts for cosmetic accessories.

These packaging net concepts have been created using 2D CAD software Autodesk, AutoCAD and will be submitted in a DWG drawing format, as requested by the client. This format is an industry standard for printing structural packaging designs.

The title-block sheet for each concept that presents the net, and its dimensions will also be submitted with the CAD files as a visual reference and formal presentation format.

The medium of communication for the exchange of the final assets will be via email, attached along with this document to conclude the project and relations with the client in a professional manner.
